Gary,

I just received the dioxin/furan data this morning. Here is the final level 2 report for the two tank samples. The file named 52863X includes the dioxin/furan data. The trouble with these two samples was the matrix. We are not running dioxin/furans on the additional samples that have been collected so I don't expect the same delay that we encountered with these samples. I am going to email the lab shortly to see how the newest samples are going. I will stay in close contact with the lab and get daily updates from them regarding the samples.

Kristie

Kristie:

Can you tell me the status of the complete tanker trailer data package as I need to send this to the ERRS contractor?

Also, I am going to be very upset if I have the same issues with the the samples that are supposed to be back this Friday for the current assessment sampling we are doing. I have activated the ERRS Contractor and expect to begin soliciting disposal on Monday, September 8. The lab knows the TAT that was requested and I expect to have the results by the TAT requested. Every day they are delayed costs me money.
